# Introductory

The present volume constitutes the 1940 edition of Henderson's Directory of Lethbridge. The work embodies a complete epitome of the civic, commercial, social, and industrial interests and activities of the municipality. It is a modern Directory in all its parts and includes all the essential features which have been proven so satisfactory to our patrons in previous issues; these have been retained and amplified, and improvements have been added as suggested by experience in order to add to the value and usefulness of the Directory, thus fully meeting the requirements of patrons; the approbation and continued patronage accorded the work are constant incentives to better service.

The publication has had the benefit and advantage of the complete organization and resources of the publishers, and of the skill and experience of their corps of enumerators and compilers added to the courteous co-operation of citizens, in the production of the volume.

## THE DEPARTMENT OF MISCELLANEOUS INFORMATION

THE DEPARTMENT OF MISCELLANEOUS INFORMATION is included in pages 9 to 56 and contains data concerning City, Provincial, and Federal Government offices, commercial organizations, cemeteries, churches (denominational and miscellaneous), colleges and schools, hospitals, homes and asylums, building exchange and associations, institutes and societies, libraries, military organizations, public schools, secret societies, etc.

## THE STREET AND AVENUE GUIDE

THE STREET AND AVENUE GUIDE is embraced in pages 57 to 109. In this feature, the names of all streets and avenues are arranged alphabetically and numerically, giving the location, number on the street and showing the occupant.

The intersecting streets are shown in the order that they come.

## THE ALPHABETICAL DIRECTORY

THE ALPHABETICAL LIST OF NAMES of citizens, business firms and corporations covers pages 111 to 307.

## THE CLASSIFIED BUSINESS DIRECTORY

THE CLASSIFIED BUSINESS DIRECTORY occupies pages 309 to 341 and exhibits the various manufacturing, mercantile, and professional names, compiled under headings appropriate to the class of industry or profession followed.

## ADVERTISING LETHBRIDGE

An important function of the Directory is to set forth the characteristics and advantages of the city as a place of residence, as a business location, as an industrial site, and as an educational centre. The Directory acts as a mirror, reflecting all that is noteworthy in the city in the above respects. In order to spread this information regarding the city broadcast over the country, the publishers have placed copies of this issue of the Directory in the directory libraries, where they are readily available for reference use by the public. There they serve as perpetual advertisements of Lethbridge, for business men the country over realize that the City Directory represents the community as it really is.

The publishers take this opportunity of thanking the citizens for valuable assistance rendered in the way of furnishing information concerning themselves, their friends and their business interests for this Directory, and also the public-spirited and progressive business and professional men for support given in the way of patronage.

Respectfully, The Publishers

## AGRICULTURE

Southern Alberta agriculture wound up the year 1939 on a buoyant note due to two factors: a wheat crop that ranked fourth largest in the history of the area, and firming prices of all agricultural products due to war demand.

Lethbridge division of the Canadian Pacific Railway produced a wheat crop of just under 42,000,000 bushels of which 40,000,000 bushels will be sold. The grain averaged slightly better than No. 2. This compares with a 1938 wheat crop of 44,000,000 bushels, which averaged close to No. 1 grade.

In the matter of price, while the "pegged" or minimum price set by the Dominion Government in 1939 was 70 cents for the first five thousand bushels in 1939, with 60 cents guaranteed for the remainder of a farmer's crop, as against a guaranteed price of 80 cents, No. 1, Fort William basis for the whole of the 1938 crop, the lower minimum was offset by the war demand which developed following the outbreak of the European conflagration in September. Prices for No. 1 rose to 85 cents or better. It is estimated that this rise will save the Dominion Government a possible \$75,000,000 loss in the minimum guarantee, while western Canada farmers will get another \$50,000,000 by way of payments on their participation certificates. In South Alberta the added value to the farmers will be close to \$5,000,000, it is estimated.

What has happened in the case of wheat has happened all the way through farm commodity prices. A bacon agreement between Canada and the United Kingdom providing for the sale of 5,000,000 pounds of Canadian hams and bacon weekly at a fixed price has put a floor under the price of hogs across Canada, with the result that hog prices may be expected to vary between 8 and 9 cents to the producer. This has resulted in a firming of coarse grain prices and a large increase in the number of breeding pigs. In the case of sheep, wool prices have been bolstered up by establishing a 45-cent minimum on a scoured basis, giving South Alberta wool producers a price around 20 cents in the grease, about double the price paid during the past few years. Cattle prices and quotations for dairy and poultry products have also firmed as a result.

The total effect is that, while prices are not high for farm commodities, they are much nearer the "parity" which farmers and ranchers have been demanding in order that their returns may more nearly equal the prices for what they have to buy to carry on their operations.

The 1938 crop was the third largest in South Alberta's history, being exceeded only by the 45,000,000 bushel crop of 1927 and the 48,000,000 bushels of 1928. The 1939 crop now ranks fourth.

At the first of July it is doubtful if the country ever looked better, and there were many predictions of the biggest crop in South Alberta's history. It looked possible to harvest 60,000,000 bushels on the Lethbridge division at that time. However, from the middle

of June to the 10th of August the crop deteriorated greatly. The mercury touched 102—hottest since 1904—and this 35-year heat record cut some yields almost to nothing. Best summerfallows sown early suffered the worst.

However, when the combines got into the fields the out-turn and yield were in most instances better than expected. The average turned out to be over 21 bushels per acre, with No. 2 as the average grade.

The crop was all harvested early, under good conditions and there was no rush to sell.

The ordinary amount of land has been summerfallowed for the 1940 wheat crop, and there is plenty of seed and feed to put it in the ground. Fall soil moisture conditions in South Alberta are about normal, though over most of the west there is said to be a deficiency. The official precipitation for 1939 at Lethbridge was 13.5 inches as against a long-time average of 15.6 inches.

Coarse grain crops in 1939 were sufficient for needs, but no more. South Alberta, except in the irrigated areas and the foothills, is not an important coarse grain producing country. The tendency may be next year to produce a higher acreage of coarse grains owing to the better prices for cattle, hogs and sheep.

A development in irrigation farming in South Alberta that is growing in importance is the production of specialized crops. Sugar beets, canning crops, commercial peas and beans are all being raised in larger acreages. A feature of the new development is the purchase of smaller tractors equipped for the production of row crops. As a result of the introduction of this labor-saving machinery it may be expected that there will be a growing acreage of specialized crops, including corn which will be used on irrigated farms as a row crop for cleaning instead of leaving the land lying idle in summerfallow.

It is significant that, despite two good wheat crops in a row—in 1938 and 1939—the demand for water conservation and irrigation development goes on apace. Irrigation farming is coming to be better appreciated year by year for the stabilizing factor it is in South Alberta agriculture.

#### IRRIGATION

In the year 1939 the early period of the growing season gave promise of heavy crops, but the lack of rainfall at the critical time, combined with the inadequate available water from the rivers through the canal systems, resulted in only average crops being harvested.

The land was very dry in the spring and many water-users irrigated before seeding.

The low temperatures, and the lack of precipitation following, retarded the growth for a considerable period of time but the heavy rains and warmer weather during June greatly improved conditions and, early in July excellent stands of wheat were estimated to yield from 40 to 50 bushels to the acre. However, a drastic change in weather conditions brought excessive heat which used up the reserve moisture.

On irrigated lands an effort was made to irrigate standing crops, but this was not successful due to the shallow root system caused by rain during June, and resulted in lodging when the water was applied. A greater reserve of moisture on the irrigated lands however, enabled them to withstand the weather conditions better than did the dry lands.

#### **Alberta Railway & Irrigation Company Project**

This project is located south and east of the Oldman River and east of the St. Mary River, adjoining the city of Lethbridge. It is owned and operated by the Canadian Pacific Railway Company and is about thirty-seven years old.

There are three co-operative districts included in this system. These are the Taber, Raymond and Magrath Irrigation Districts, all of which were organized under the Irrigation Districts Act of Alberta and receive their water supply from this project.

The project is a well settled and prosperous community with 1,577 irrigable units under cultivation.

An all time record for delivery of water to farmers was attained this year with highly satisfactory results, the first delivery to the land being made on April 22nd.

A heavy maintenance programme was carried out immediately after the water was closed out of the system on October 4th. This can be considered as the start of a four-year programme on replacement and maintenance work.

#### **Taber Irrigation District**

This co-operative district is located about thirty miles east of this city.

It is owned and operated by the farmers and comprises 21,661 acres of land.

The irrigation water is supplied from the A. R. & I. project in bulk at their headgates at Chin Reservoirs.

It is a thrifty, prosperous community which has been in operation since 1920.

The headquarters of the district is at Taber, where a canning and a broom factory are also located.

#### **Raymond and Magrath Irrigation Districts**

These are co-operative districts owned and operated by the farmers under them, the water being supplied by the A. R. & I. project.

The Raymond district, which was part of the old A. R. & I. project, was organized in 1925 and comprises the irrigable areas in Raymond, Stirling and Welling, totalling 15,130 acres with 403 units. Within its boundaries is located the thriving town of Raymond with its sugar factory.

Good crops of hay, grain and sugar beets were grown in the district, the principal irrigated crops being sugar beets and alfalfa and only a limited acreage of grain was watered.

The district produced 48,496 tons of sugar beets from 4,066 acres, giving an approximate average of 12 tons per acre and an income of about \$300,000.

Livestock feeding is carried on extensively in the district and 4,000 head of cattle and 18,000 head of lambs are now being prepared for market.

Shipments of livestock from the district in 1937 were as follows:

Horses .....	179
Cattle .....	3,759
Lambs .....	17,637

The Magrath district was also organized about the same time as Raymond and comprises a total of 7,029 acres of irrigable land, covered by 191 units. The headquarters of the district is in the town of Magrath.

#### **Canada Land and Irrigation Company Limited**

The project of the Canada Land & Irrigation Company Limited is situated about sixty miles east and north of Lethbridge with Vauxhall as its commercial centre.

A very successful year was recorded for this project. Water supply was adequate and crop returns, both in yield and price, were higher than for several years.

New land sales were made to thirty-seven farmers of 4,500 acres of irrigable land, and the requests far exceeded the area available for sale. There was a good supply of feed and a large number of stock is being wintered in the district.

Further extension in the irrigation system will be made in 1938 to provide for further land sales.

#### **United Irrigation District**

The United Irrigation District is situated about 20 miles north and west of Cardston. It comprises an area of about 65,000 acres of which 35,000 are irrigable. It has an ample water supply from the Belly River.

This is a co-operative project owned and operated by the farmers under the supervision of an official trustee. The headquarters are situated at Glenwoodville, Alberta. The principal crops are grain, root and hay. The project also supports a livestock and poultry industry.

#### **New West Irrigation District**

This is a small co-operative district comprising a total of 7,680 acres, of which 4,500 acres are irrigable. It is owned and operated by farmers under the supervision of an Official Trustee appointed by the Provincial government, and adjoins the Canada Land & Irrigation project from which it receives its water.

The total acreage sown during the year was 2,773 acres of which 218 acres was in alfalfa, the remainder in various cereal crops. As in other districts spring conditions were favorable, but surface moisture was lacking. Early irrigation was necessary to germinate the crops which gave a fair yield. Shipments of livestock were made during the year.

## LETHBRIDGE NORTHERN IRRIGATION DISTRICT

This project was organized under the Irrigation Districts Act of Alberta, and is located on the northerly side of the Oldman River, from which it receives its water supply.

It has been in operation for about fifteen years: firstly as a co-operative district owned and operated by the farmers, and latterly under the supervision of an Official Trustee appointed by the Provincial Government. There are several small towns and coal mines within the boundaries of the project, and a sugar beet factory is situated in the town of Picture Butte.

This project compares very favorably with others in the Lethbridge district, and good crops were raised during the year. All the surplus hay was disposed of to feeders, also barley and oats, which were sold at higher than the prevailing market prices, and the raise in the price of sugar beets materially helped the growers.

The feeder business is increasing every year, and more and more farmers are beginning to see that this is the most profitable way to market their coarse grains and fodder, in addition to providing profitable winter employment for themselves. They also notice the increased crop yields, due to the application of manure to the land. This has had a very decided effect on land growing sugar beets, with resulting increased tonnage. Actually some five thousand head of cattle, or two hundred and seventeen carloads, were shipped from the Lethbridge Northern during the year, and thirty thousand head or one hundred and fifty-eight carloads of lambs.

One very noticeable change in the past few years, and one that reflects the prosperity of a large number of our farmers, is the improvements that have been made in the way of better homes, better buildings, better equipment and cleaner looking farms.

---

## BEEF SUGAR INDUSTRY

Southern Alberta in 1939 again broke the record for production of sugar beets in total tonnage. The acreage grown was increased over 1938 to the extent of 1,870 acres or about a 10 per cent. increase.

Figures for the season show:

Acres Planted .....	21,771
Acres Lost .....	308
Acres Harvested .....	21,463
Beets Produced — Tons .....	262,337
Yield Per Acre — Tons .....	12.22

Both tonnage per acre and the sugar content of beets were lower than in 1938 due to the climatic conditions of the season. While comparison therefore with 1938 shows some reductions in farm yields, yet 1939 was better than a normal year for sugar beets, and results indicate the secure position of this crop as a cash basis for irrigation farming in our location.

The agricultural statistics of the crop for the last three years follow:

	Acres Hrvstd.	Beets Bought	Sugar* Produced	Sugar Cont'n't	Purity
1937 .....	19,819	235,481	756,037	18.16	88.47
1938 .....	19,593	252,749	788,989	17.96	88.41
1939 .....	21,463	262,337	803,537	17.67	87.80
* Cwt.					
Beets sliced at Raymond, 1939 .....					
Beets sliced at Picture Butte, 1939 ....					

One of the most important factors of improvement in the growing of sugar beets has been the Fifteen Ton Beet Club fostered by the Canadian Sugar Factories, the Lethbridge Herald and this Board of Trade. To qualify, a beet grower must grow an average of fifteen tons per acre on his harvested acreage of beets and pass a successful field score. The prize winners for 1938 crop in the first ten places were:

1. Smith Farms, Lethbridge .....
2. Albert Green, Tabor .....
3. Ralph Johnson, Barnwell .....
4. Ivan E. Harris, Tabor .....
5. B. R. McMullin, Barnwell .....
6. D. Schultz, Lethbridge .....
7. Jacob Auch, Picture Butte .....
8. J. W. Evans, Raymond .....
9. S. Molnar and J. Sofar, Picture Butte
10. E. Mercer, Lethbridge .....

While the figures are not completed for the 1939 crop contest, it is known that several of the winners have secured outstanding beet crops. Up to the present time 184 growers have qualified since the start of the club, or about 18 per cent. of the total number of beet farmers.

The production of sugar in this one year amounts to 80,353,720 pounds. The problem of the Alberta sugar industry is, therefore, that of markets in which this sugar can be sold so that it will produce fair return for growers, laborers and the factories.

During the sugar beet operating season there are approximately 1,100 farmers, 1,800 farm laborers and 575 sugar company employees engaged in the processes of growing, harvesting and storing the beets and refining the sugar. The sugar company will pay for the 1939 crop approximately \$1,950,000 to the farmers, \$250,000 for freight, \$385,000 for materials used, and approximately \$400,000 for salaries and wages. Thus the production of new wealth from this industry is well over \$3,500,000.00 per year.

The cycle of production from this irrigated land crop only commences with sugar. From the beet pulp and betalasses there will be feeding, during the winter, approximately 50,000 head of sheep and 6,000 head of cattle. This livestock feeding industry is, in my opinion, the brightest development in the beet areas. It will provide a constant employment and market under winter conditions.

The Lethbridge area in developing these potentialities cannot help but become stabilized and secure as a home for Canadians.

**Sugar Beet Tops.** Fresh beet tops at topping time have a very high feeding value. On the average they will weigh 70 to 80% of the beet tonnage at topping—that is, a 16-ton yield of beets will produce 11 to 13 tons of fresh tops. These tops contain about  $1\frac{1}{2}$  tons of dry matter and nearly a ton of digestible nutrients. This is about equal to the digestible nutrients in 1.2 tons of barley.

Beet tops lose much of their feeding value when left lying too long in the field, and should be harvested and stored in the best way to conserve as much of this feeding value as possible, for they usually provide the cheapest available source of fattening feed. Such beet top fields are sold to livestock feeders or used by the farmers, as a basis for his own feeding operations.

**Wet Beet Pulp.** Wet beet pulp is a succulent carbohydrate or strictly fattening feed. It contains from 10 to 15% dry matter. This dry matter when fed in a well balanced ration is equal to corn. For instance, a ton of wet beet pulp has the same feeding value as 200 to 300 pounds of corn, depending on the amount of dry matter in the pulp at feeding time.

Over 40,000 tons are now available each year. First to beet growers, and after their needs are satisfied—to ranchers, farmers and feeders generally.

**Betalasses.** Betalasses is the third by-product. Around 4,000 tons of Betalasses is produced each year. This is a carbohydrate concentrate. One hundred pounds of beet molasses contains 80 pounds of dry matter and 60 pounds of digestible nutrients, or as much feeding value as is found in 76 pounds of barley. Beet molasses is strictly a fattening feed and because of its extreme palatability often returns a full grain value when fed in limited amounts.

Beet molasses is high in mineral matter and should always be started lightly, using 1-10 lb. for lambs and  $\frac{1}{4}$  pound for cattle, then increasing gradually in about two or three weeks to  $\frac{1}{2}$  pound for lambs and 3 to 5 pounds for cattle.

After cattle or lambs have been brought gradually to a full feed of molasses, it can be self-fed safely in an open tank or trough as long as other feeds are used in the ration with it. When beet molasses is sprinkled over stemmy hay or coarse straw, animals will clean it up without leaving any waste.

## LIVESTOCK

The year 1939 may be considered a banner year for livestock interests in Western Canada. All classes of livestock sold at higher prices than at any time during the past seven years.

Due to the drought conditions prevailing a year ago the volume of livestock had decreased somewhat below the five-year average, but the value has increased due to higher prices.

The movement through the Lethbridge Stock Yards for the year 1939 shows an increase of 12.7%, while the total value shows a slight increase over the larger volume of 1938. The following are comparative figures in number of head and valuation over a five-year period:

**Volume—**

	1935	1936	1937	1938	1939
Hogs .....	53,963	61,745	46,041	30,175	37,175
Sheep .....	17,368	21,660	14,270	17,214	16,969
Cattle .....	11,499	17,332	15,605	10,567	12,233
Horses .....	1,227	3,814	1,558	2,630	1,907
	84,057	104,551	77,474	60,586	68,284

**Value—**

Hogs ...	\$ 771,719	\$ 802,685	\$ 598,533	\$ 452,625	\$ 557,625
Sheep ...	69,452	86,640	85,620	86,700	118,300
Cattle ...	459,960	346,640	780,250	528,350	632,000
Horses ...	41,800	190,700	9,348	10,612	7,628
	\$1,342,931	\$1,426,665	\$1,473,751	\$1,078,287	\$1,315,553

At the present time there is the largest number of cattle and lambs on feed in the Lethbridge district that we have had to date. Some 60000 lambs and 14,000 head of cattle are in our feedlots. Lamb prices at the present time are encouraging to our feeders although cattle prices might only be termed as fair.

There is an abundance of cheap feed available, including by-products from our beet factories, and while some of our cattle feeders may not make a large profit, indications are that on the whole the winter of 1939-40 will again be a profitable one for livestock feeders in the Lethbridge and surrounding districts.

---

## DAIRYING

Although 1939 was a favorable year for dairying, the production and value of dairy products did not reach the high figures of 1938.

The production of creamery butter shows a decrease of 4.6 per cent., and factory cheese a reduction of 10 per cent., as compared with the all time records established in 1938.

The heavy rainfall in June, that extended over a large area of the province, provided excellent pasture for dairy cattle during the early part of the summer. This was also a factor in producing an excellent hay crop in most districts. However, a prolonged dry period, beginning the middle of July, had a devastating effect on pastures the latter part of the season and greatly reduced the quantity as well as quality of coarse grains. This fact was reflected in the milk production during the fall months.

### Number of Factories.

There were 96 creameries in operation during 1939, a decrease of one over the previous year. Two other factories were closed during the season and only 91 were in operation after June.

There were 19 cheese factories operated the past year, as compared with 15 in 1938. Two additional factories are under construction and expect to open early in 1940.

### Improvement in Quality.

The quality of cream delivered to creameries shows an improvement over the figures for 1938. This was undoubtedly a factor in improving the quality of creamery butter. The highest percentage of 93 score butter, since the grading became a function of the federal department, is reported in 1939.

Exhibits of creamery butter again made a creditable showing when 45.3 per cent. of all prizes at the leading Canadian exhibitors were won by Alberta factories.

In the Lethbridge district there were seven creameries in operation during 1939. The southern section shows an increase in production of 1.4 per cent., while the province on the whole shows a decrease of 4.5 per cent. Since prices advanced in October there has been a steady increase in production in this district and the quality is good.

As regards the effect of the war on the dairy industry in Canada there have been heavy exports of cheese to the United Kingdom and cheese prices have advanced to a greater degree than butter. It would appear that their immediate requirements were for cheese and evaporated milk. The all-Canada storage holdings of butter at the end of December were slightly less than last year and no butter has been exported since the outbreak of the war. In the event of prolonged hostilities it would seem quite clear that the United Kingdom would require all the surplus dairy products we have, and a general increase in production is looked for.

The new cheese factory at Coaldale has enjoyed another successful year, although the cheese prices were low in the early part of the year.

A new cheese factory is under construction at Glenwood.

The amount of butterfat sold in ice cream, also city milk and cream sales, is about the same as last year. There is plenty of feed in the district and conditions are ideal for butterfat production on these irrigated projects.

The present outlook is for an increased demand and the general reports should encourage farmers to increase production during 1940.

### Summary of the Values and Production for 1939.

## HAY CROPS

The hay crop of the district was lighter than that of last year by possibly ten to fifteen per cent. The excellent rains which were received in June produced a good first cutting, but the drought which followed later was responsible for a light second cutting. A small percentage of the cutting was damaged from rain during the process of curing, but the second cutting was all stacked without any damage. The carry-over of hay from the 1938 crop was larger than usual, but in spite of this, and the mild winter now being experienced, it is expected that nearly all of the hay on hand will be used for this winter's feeding. The rain from the continuous wet weather in June soaked into many of the old stacks quite badly doing considerable damage.

Practically all of the timothy fields in the district have now been broken up and little or no timothy hay is now grown for shipping to outside markets. Alfalfa is practically the only hay crop grown for that purpose. Sweet clover is replacing alfalfa to quite an extent for local feeding, and the acreage sown to it is increasing each year. About three carloads of sweet clover seed are sown annually in the Lethbridge district. It is grown more for the purpose of enriching the soil for sugar beets than for the production of hay.

---

## POULTRY

The early part of 1939 was relatively favorable to poultry producers generally and this was reflected in the strong demand for baby chicks. Hatcherymen report the largest volume of business for some years with prices quite satisfactory. The improvement in demand for chicks naturally improved the market for hatching eggs and therefore was a double benefit. Barred Plymouth Rocks and White Leghorns continued to be the preferred breeds with other breeds such as Rhode Island Reds and New Hampshires taking minor positions. The latter is a new breed introduced within the last few years.

The outbreak of war in September resulted in a curtailment of poultry meat exports to Great Britain and this was reflected in lower prices. This was especially noticeable in the prices paid for turkeys for the Christmas trade. The general price was only thirteen cents for Grade A, to the producer, and this was a ridiculously low price in relation to its value and the prices of other meats. Obviously it was not a profitable price to the producer and many producers took their turkeys back to the farms rather than sell them at that price.

---

## HONEY

Spring and early summer weather was cool and wet to permit colonies to reach maximum strength for the honey flow. The main honey flow began, in most districts, during the first ten days of July and was heavy until the end of the month. There was little nectar available for the rest of the season. The termination of the honey flow in July is thought to have been the result of an absence of rain in July and August. The low humidity and absence of moisture had a favorable effect on the quality of the honey.

Experienced beekeepers, to some extent, offset the unsatisfactory spring weather by feeding their colonies. They also anticipated and prevented swarming, which had a weakening effect on many colonies not so controlled. Thus, in spite of a short season, some beekeepers had a normal yield. Most beekeepers, however, did not have their colonies in good condition till near the end of the flow, with the result that they harvested only from a half to three-quarters of a normal crop.

Many colonies have gone into winter quarters light of stores. This resulted from the absence of a fall honey flow and the difficulty in obtaining sugar for feed. The temporary limitation of the sugar supply, occasioned by the international situation, coincided with the fall feeding of colonies.

---

### MILLING INDUSTRY

The Ellison Milling & Elevator Company Ltd., which is the only flour mill in the Lethbridge district, has been in operation for over thirty years during which time they have built up trade and a reputation for honesty and satisfaction guaranteed.

The milling industry has been better than the past year. The 1938 wheat crop was larger, it was a high quality crop from a milling standpoint and produced a high grade flour.

The export business was not as good as some years in the past. The Ellison Milling & Elevator Co. Ltd. has enjoyed a good Chinese business in the past, but with the short wheat crop and no low grade wheat, the local mill was not able to compete with the other wheat markets of the world. The European market has been steadily increasing, and the local mill increased their shipments to that market during the past year. The domestic demand was steady throughout the year with the local mill shipping flour to all points west to Vancouver. They have their own warehouses at Nelson, Vancouver, Calgary and Edmonton, which they use as distributing centres.

With the severe winter in the early part of the year, the demand for feed was very heavy and all available supplies were taken.

The Ellison Milling & Elevator Co. Ltd. have their own line of elevators which were very favorably situated for the crop of 1939, as the best crops were in the western part of Alberta. This enables them to buy their wheat supplies direct from the farmers and to be able to blend their wheat before grinding, all of which is very necessary for the best quality of flour.

The Ellison Milling & Elevator Co. Ltd. also have the largest and best equipped feed plant in Southern Alberta for grinding and mixing all kinds of feed for stock, hogs and poultry. They are also equipped to do custom grinding so that farmers can get their own grain ground without waiting.

### ALFALFA MEAL MILLING

Excellent stocks of high quality alfalfa were grown in the district during the growing season of 1939. Important centres of Western Canada, from Winnipeg right to Vancouver, are served by the local mill.

Raw material of satisfactory grade, together with some new and improved facilities installed by Geo. W. Green & Company make it possible to turn out a product that is more than satisfactory to the trade.

Sweet feeds are made up of the blended product of the local plant together with Betalasses from the neighboring sugar factories, making an important department of the alfalfa milling trade.

---

### THE GREEN STAR MILLING CO.

Specialize in the manufacture of rye flour. During 1939 they have increased the capacity of their mill from 25 barrels per day to 75 barrels per day.

In the last 30 years, nearly all the rye flour used in western Canada was imported and the consumer paid prices based on eastern markets. One can calculate the consumer paid the freight both ways besides duty and exchange if the flour came from the United States. Since the Green Star Mill began operation the dealers and consumers have participated in a saving of about 50 cents a sack besides giving employment to men in the new industry.

The quality of the flour is equal to the imported and the leading bakers in western Canada are now buying the Green Star product.

Besides the manufacture of rye flour, the new plant has manufactured buckwheat flour from the buckwheat grown in the district, also barley flour and meal from a special new variety of hull-less barley which has met with much favor in the markets of British Columbia.

---

### ANNUAL EXHIBITION

An annual agricultural, livestock, industrial and art exhibition is held by the Lethbridge Exhibition Board around July at the exhibition grounds situated at the East end of the City and comprising around seventy acres of land on which there are fourteen commodious barns, two large exhibits buildings, a number of administrative buildings and a grandstand with a capacity of five thousand.

The exhibition is classified as a B-class exhibition and has a three-day attendance of approximately 50,000. The grounds and buildings are owned by the City of Lethbridge and are operated under lease agreement by the Exhibition Board. During the last few years the development of Junior Farmers' Livestock Club work (Q.V.) has been exceptionally promising.

## MINING

In looking over previous mining reports published by this Board, an apologetic note can be traced throughout each year for the condition of the industry and hopes expressed that the future will be better, but the time has arrived when we must face the facts and see if something can be done to remedy these unsatisfactory conditions.

Owing to the steady encroachment of other fuels, such as gas and oil, coal mining in Alberta will be forced to find markets, other than the present ones, if those engaged are to remain in the industry.

Output of domestic coal from the Lethbridge area showing percentage of provincial output for the past five years, is as follows:

	Total Domestic Coal—Alberta	Lethbridge Area	Per Cent.
1935 .....	2,647,912	349,676	13.2
1936 .....	2,841,231	351,564	12.4
1937 .....	2,631,150	349,881	13.3
1938 .....	2,453,263	342,113	13.9
1939 to Nov. 30th..	2,214,336	305,568	13.8

The foregoing table shows a steady decline in the percentage of coal produced in the Lethbridge area, to that of the total domestic coal of the province until the year just closed, when a slight improvement is noticeable. It is hoped, and, in fact, anticipated, that a steady increase in this direction will be shown during the next few years but until crop conditions improve, there is little hope of any substantial coal increase.

## WHOLESALE

Business in the Lethbridge area for 1939 was very satisfactory. Conditions generally over the south country were better than the previous year and in certain districts crop yields were greater than those for a long period. This applied to both dry land and irrigation areas. Consequently buying during the fall months was in much larger volume. Unfortunately the price recession which set in across the line during the summer had its effect in this country also, and towards the year end business slackened off quite perceptably.

## HIGHWAYS AND TOURIST TRAFFIC

It is gratifying to report that during 1939 an energetic policy of hard-surfacing of several blocks of streets in this city was carried out. It is likewise pleasing to record that the Alberta Department of Public Works re-conditioned and modernized highway No. 3 between this city and Macleod, including the hard-surfacing of several miles from the west top of the coulee hill to Monarch. A bitumen "seal coat" was applied to the "Park to Park" highway between Waterton Lakes Park and Okotoks. That part of Chief Mountain highway within Waterton Lakes Park was also permanently hard-surfaced.

Though war was not declared until Sept. 10, and although the tourist season was at that date well past its maximum, it is felt that the war had a very noticeable effect on the volume of tourist travel between the United States and Canada. The uncertainty attending the opening period of the war depressed fall tourist travel to a minimum. It is reliably estimated that largely due to the war, expenditures by American tourists in Canada decreased \$13,000,000 from that of 1938. However, Alberta was noticeably fortunate in that the ebb and flow of tourists through ports of entry in Southern Alberta and southeastern British Columbia increased in 1939 by nearly six per cent. over that of the year previous. Every port in Alberta showed a splendid increase; but one port in B. C. (Newgate) was closed, and two of the other four ports showed striking decreases. This was due to the great decrease in the number of Albertans passing during fall months into United States to spend the winter in California or some other part of the United States. This decrease was chiefly due to the depreciation of the Canadian dollar by the Americans.

A careful study of the flow of auto passengers through these ports during 1939 is well worth while and very illuminating. Here are the figures:

Port of Entry	Comparison of 1939 with 1938					
	1938	1939				
			Pass.	Pass.	Incr.	Dcr.
Coutts .....	166,124	176,605	10,481	—	6.3	—
Chief Mountain ..	66,889	88,570	21,681	—	32.4	—
Carway .....	55,564	57,791	2,227	—	4	—
Whiskey Gap ....	7,709	9,089	1,380	—	17.9	—
Aden .....	4,032	6,145	2,113	—	52	—
Wild Horse .....	3,554	4,604	1,050	—	29.5	—
Cardston .....	966	1,083	117	—	12.1	—
 Totals for Alberta	 304,838	 343,877	 39,049	—	12.7	—
 Kingsgate .....	 128,276	 131,634	 3,358	—	2.6	—
Rykerts .....	79,049	73,772	—	5,277	—	6.6
Roosville .....	15,170	—	—	—	—	—
Newgate .....	8,917	17,587	—	6,500	—	27
Flathead .....	622	986	364	—	58.5	—
 Totals for B. C. ..	 232,034	 223,979	—	8,055	—	3.4
 Gross Total .....	 536,872	 567,866	 30,994	—	5.77	—

In 1938, nearly 57 per cent. of all the passenger traffic flow through these border ports passed through Alberta ports while last year (1939) the corresponding figure was 60 per cent.

It is significant that this flow shows an increase through every Alberta port with a total increase of 12.7 per cent. while the flow through B. C. ports showed a decrease of 3.4 per cent.—two ports showing an increase and two others a much larger decrease.

It is very significant that during 1939 over 60 per cent. of the traffic flow across the international boundary passed through one or the other of the seven Alberta ports of entry—and that this figure increased during 1939 from 57 per cent. in 1938.

There can be no doubt that Waterton and Banff National Parks have been the chief attraction to American tourists. A cursory glance at the map of Alberta and southeastern British Columbia clearly indicates as least two main all-the-year-round highways leading northward to Banff, viz: that through Kingsgate in British Columbia and that through Coutts in Alberta. (Chief Mountain highway is open for only about five summer months.)

Registrations at Waterton Lakes National Park reached another new high mark of 108,527—an increase of 26 per cent. over 1938. This is almost exactly three times the registration of 1934.

1940 should be a banner year for tourist traffic into Alberta. With war closing Europe to American tourists, with the American dollar at a premium in Canada, and with the opening of the strikingly scenic "Icefields Highway" between Lake Louise and Jasper Park, there is every good reason to anticipate that there will be an enormous influx of American tourists to visit Waterton, Banff and Jasper National Parks.

---

### OIL AND GAS

During the year 1939 oil operations in Southern Alberta continued on a progressive scale although no new fields were brought into production. During the year the Red Coulee field produced 13,022 barrels of light crude while miscellaneous wells, including those at Tabor and Del Bonita, contributed another 13,736 barrels during the year.

Total production in the province of Alberta was 7,594,411 barrels.

The Taber field saw little activity although Border Petroleum at Barnwell lowered their well to the production horizon getting shows of both oil and gas. The well is being put in condition for a test. North Taber Royalties well, north and east of Taber, was not completed and is inactive at the present time.

In the Del Bonita field Terminal Oils reconditioned their wells with some success although just what these two wells will do on the pump over a sustained period is not known. This field is expected to see considerable development during the year 1940.

An important test was put down on the Spring Coulee structure by the Cord-Western Drilling interests. In the lime this well found good oil saturation but a faulty shutoff allowed an intrusion of water from an upper horizon. While this was disappointing to the backers it does not mean that the well will be abandoned. It will be re-cemented in the hope of shutting off the water necessary before a production test can be made.

There were no developments in the Watson field at Lundbreck although a new well was started at Pincher Creek during the year, also the Franco No. 2 west of Cardston. The Lyons-McIntyre well on the McIntyre ranch, south of Magrath, is expected to be completed in 1940.

## **Civic Administration**

### **CIVIC OFFICIALS**

Mayor—D. H. Elton, K.C.

Manager—J. T. Watson

Councillors—J. A. Jardine, R. E. Knight, F. E. Reagh, E. Castles, A. W. Shackleford.

**St. Patricks School**  
905 4th Avenue South  
Principal—Sister A. Felicitas Fortier

**LETHBRIDGE SCHOOL DISTRICT NO. 7**  
704 3rd Avenue South

The division administers schools in the area contained in the Harmony Little Bow and Warner Municipality w. s. and in improvement districts Nos. 5, 6, 35, 66, 67, 68 and 96.

Five trustees constitute the board, each elected for the twelve or more school districts in his subdivision. The board meets the third Saturday of every month.

Members of the board are as follows:

Subdivision 1—C. R. Gower, Carmangay

Subdivision 2—T. Pavan, Coalhurst

Subdivision 3—R. W. Clow, Picture Butte

Subdivision 4—C. B. Andrews, Lethbridge

Subdivision 5—M. M. Mueller, Warner

**Officials**

Chairman—M. M. Mueller

Secretary-Treasurer—Robt. M. Glover, B.A.

Superintendent—Owen Williams, B.A.

Number of school districts in the division 78.

Number of operating rooms 91.

## **Miscellaneous Information**

### **OFFICERS AND COUNCIL OF THE LETHBRIDGE BOARD OF TRADE**

Honorary Presidents—C. A. Magrath, W. A. Buchanan

President—Chas. MacMillan

## Henderson's Lethbridge Street and Avenue Directory 1940

First Ave. (N.)

HENDERSON'S (1940) LETHBRIDGE

First Ave. (S.) 67

### NOTICE

◆ The Symbol following the residence name, indicates that to the best of our knowledge someone living in the house is the owner.  
★ This Symbol indicates that a telephone is located at this number on the street.

This new Home Owners' Tenants and Phone Directory is compiled from information taken on a special house-to-house personal canvass. We do not guarantee to be absolutely correct in every detail, but we believe it to be very accurate and complete, as far as it has been possible for us to get the information personally from someone at each residence. Where occupants have been absent the "owner" information has been left out.

### FIRST AVENUE (North)

Runs from Fifteenth Street north-east to city limits.

Odd numbers north side

1301 Stacey Lumber Co Ltd  
1311 Peters Walter L◆

More than  
ninety per  
cent of all advertising  
is discarded before  
they're a year old

*Return to any*

Edmonton  
Public Library  
service point

After the new ones come out  
your advertisement in the directory  
is still good, for old  
directories are seldom discarded  
while they hold together. Years later many of  
these directories will still be  
in active use. Your advertisement  
is still in service

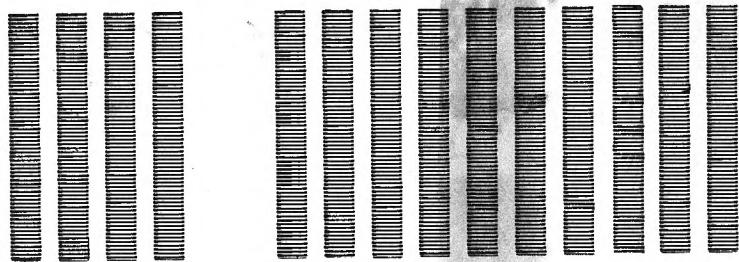

Do you want LONG-LIVED advertising?
